

A 5-PART MINI-SERIES

CHOOSE YOUR BOW

FIND THE BOW THAT'S RIGHT FOR YOU

RECURVE · GENESIS · COMPOUND

CHOOSE YOUR BOW

EPISODE 1

Welcome to Archery

EPISODE 1 · A QUICK HISTORY

Older than you think

- **64,000 years** — the oldest arrowheads ever found
- **8,000 years** — the oldest complete bow, from a Danish bog
- **3× safer** — than golf, according to studies
- **Bhutan** — the only country where it's the national sport

EPISODE 1 · THE LINE-UP

Meet the three bows

- **RECURVE** — the classic you see at the Olympics
- **GENESIS** — the bow U.S. schools use to teach from zero
- **COMPOUND** — the pulley bow for hunters & precision

CHOOSE YOUR BOW

EPISODE 2

The Recurve Bow

EPISODE 2 · RECURVE

From the Mongols to the Olympics

- **~1600 BCE** — the recurve design already existed
- **The Mongols** — short, powerful recurves fired from horseback
- **Since 1972** — for decades, the only Olympic bow

EPISODE 2 · THE PARTS

Simple, four pieces

- **RISER** — the grip; holds the sight window
- **LIMBS** — the engine; they bend and store power
- **STRING** — connects the tips, launches the arrow
- **ARROW REST** — where the arrow sits before the shot

Takedown tip: swap just the limbs for stronger ones as you grow.

EPISODE 2 · RECURVE

Who it's for

- **Classic challenge** — loves the technical, Olympic side
- **Good form** — happy to invest time in technique
- **Grows with you** — upgrade limbs, not the whole bow

CHOOSE YOUR BOW

EPISODE 3

The Genesis Bow

EPISODE 3 · GENESIS

Built for U.S. schools

- **NASP, 2002** — created in Kentucky with the Dept. of Education
- **10,000 schools** — 4M+ students, 47 states, 5 countries
- **One design** — fits a whole class of different sizes

What makes it tick

- **SINGLE CAM** — smoother shot, less recoil & noise
- **IDLER WHEEL** — guides the string, near-zero upkeep
- **NO fixed draw length** — the same bow fits anyone
- **10–20 lb** — adjustable, but still feels real

EPISODE 3 · GENESIS

Who it's for

- **Trying it out** — no big commitment up front
- **Families & kids** — and groups
- **Lowest cost** — and lowest maintenance

CHOOSE YOUR BOW

EPISODE 4

The Compound Bow

EPISODE 4 · COMPOUND

A saw, a recurve, airplane pulleys

- **1966** — Holless Wilbur Allen invents it in Missouri
- **The idea** — reach a deer before it can move
- **Patent 1969** — the modern compound industry begins

The mechanical edge

- **CAMS** — two wheels that create the advantage
- **CABLES** — work with the cams to move force
- **LET-OFF** — hold ~10 lb on a 70-lb bow at full draw
- **RELEASE + PEEP** — a trigger & sight ring for consistency

EPISODE 4 · COMPOUND

Who it's for

- **Hunting & competition** — precision shooters
- **Loves the tech** — the gear & mechanical side
- **OK investing more** — for speed & accuracy, less strain

CHOOSE YOUR BOW

EPISODE 5

Which Bow Is Yours?

Four quick questions

- **1 GOAL** — just trying it, Olympic dreams, or hunting?
- **2 BUDGET** — how much do you want to spend up front?
- **3 HOW OFTEN** — occasional, a growing hobby, or serious?
- **4 SPACE** — indoor range, room for form, storage?

Quick reference

BOW	GOAL	BUDGET	SPACE
Recurve	Technical, Olympic	Low–mid (grows)	Needs form room
Genesis	Trying it, families	Lowest cost	Simplest to store
Compound	Hunting, competition	Highest	Needs tuning

Pause here any time — this is your cheat sheet.
